Owner/Manager

Texan Drilling Services, LLC

ABOUT THE COMPANY

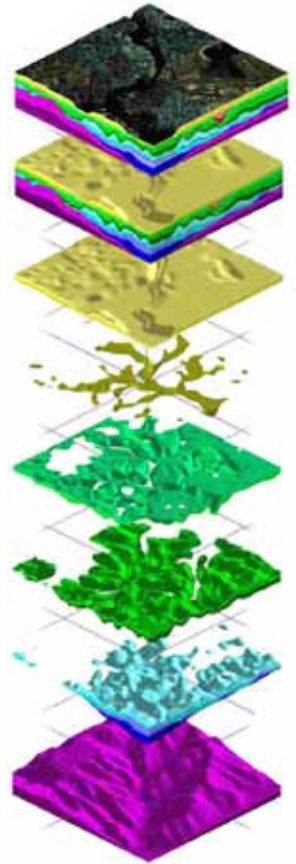

Texan Drilling Services, LLC is a U.S. owned mudlogging and pressure detection services company with offices in Weimar, TX. We are dedicated to providing intensive well-site services, with an extensive range of mudlogging services and geological consulting.

Texan Drilling Services was founded by Damon Darnell and prides itself on its leadership and direction of 24-hour mudlogging services, with the most efficient and effective technology available. We are fully insured and have provided services for companies such as: XTO Energy, Anadarko, Chesapeake Operating, as well as many other independents. Cutting-edge data collection and communications allow precise data quality and reliability. We are capable of fulfilling any mudlogging requirements you may have.

ABOUT OUR TEAM

Our mudlogging team is directed by our operations manager, Damon Darnell, who has numerous years of mudlogging experience. Our team consists of trained, highly experienced and personable mudloggers and geologists. We maintain high employment standards by hiring the most qualified and well-trained personnel.

SERVICES & APPLICATIONS

Data Acquisition Units

Two Texan Drilling Service technicians are present on a 24-hour basis, preparing daily mud logs, correlation logs and other reports. This is accomplished using a computerized mudlogging unit equipped with automated logging software, total gas hotwire, a gas chromatograph, a log draw computer and fluorescence detection equipment.

Our technicians monitor trip gas, connection gas and keep all records and reports to determine the important gas zones. They are all updated and submitted in a timely manner.

COMPLETE LOGGING SERVICES

- 1.** Our computerized mudlogging units are equipped with an acquisition computer with automated logging software, total gas hotwire and a gas chromatograph, plus a log draw computer with "Rockware's" logplot application software.
- 2.** Our logging units are manned 24 hours a day by two technicians. Our technicians keep all records, including trip gas and connection gas reports to determine the important gas zones.
- 3.** We continuously monitor formation and background gases coming from the well above.
- 4.** Lithologic interpretations and fluoroscopic examination of well cuttings caught at pre-determined intervals by the drilling rig crews or our technicians.
